

Please save the date for **BEAN17, the annual Biosciences Education Forum** – this year returning to the Shine Dome, in Acton, Canberra on **Monday, 11 and Tuesday, 12 December**. By popular demand, we'll have another the forum dinner at the **Monster Kitchen and Bar**, which is now rated as one of the top venues in Australia!

This year's theme will be ***"Back to the Future: Rethinking Curriculum"***. No more reinventing the wheel folks, let's find the other three and drive off into the brave new world! We are working to a more interactive format this year – with keynote talks and interactive sessions where you can learn some new tools and methods. We will also welcome posters and some short presentation from those of you doing interesting new "stuff".

These BEAN conferences are designed to be of interest to colleagues across all of STE(A)M, as we really seek to explore ways in which to best prepare ourselves and our students for learning in the 21C. In particular, to explore how we can collaborate to enhance the curriculum from an interdisciplinary perspective that draws from all areas of academia. Please encourage your colleagues from other disciplines to join us!

Registration info will be announced soon, and as always we will try to keep costs to a minimum. In the meantime, if you have any questions please contact Steph Beames at s.beames@uq.edu.au

Philip Poronnik

Professor of Biomedical Sciences
Physiology | School of Medical Sciences
THE UNIVERSITY OF SYDNEY
philip.poronnik@sydney.edu.au
